Historical Walking-Tour Route Planner Mobile App

Student ID	Student Name	Workload Distribution
IT23678668	DE SILVA D V K D	Historical Discovery, Community Feed & Tour Planning
IT23687882	Maduvinda D K A	User Management, Profile Management and Smart Travel Buddy Matching with Real-Time Chat System
IT23687646	Lekamge U L C D	Payment Option, Booking Checkout & User Ratings/Reviews
IT23667778	Siriwardhana H L	Tour Guider Booking, Scheduling, Meeting Logistics & Live Guide Tracking

Historical Walking-Tour Route Planner Mobile App

1. Requirement-to-Interface Traceability

1.1 Main Interface Mapping

ID	Requirement	Affected Interfaces	Role	Source Status
FR01	Authenticate users through login and account recovery.	Login, Email Verification, Forgot Password, Recovery Verification, Reset Password	Traveler / Tour Guide	Provisional mapping
FR02	Register and manage traveler and tour-guide accounts and profiles.	Choose Account Type, Tourist Registration, Guide Registration, Tourist Profile, Guide Profile	Traveler / Tour Guide	Provisional mapping
FR03	Discover, search and view historical place information.	Home Feed, Search Results, Place Details	Visitor / Registered User	Existing requirement
FR04	View and interact with community posts.	Home Feed, Trending Posts, Comments	Visitor / Registered User	Existing requirement
FR05	Create and upload visitor posts related to historical places.	Create Post interface	Registered User	Existing requirement
FR06	Create a multi-destination historical tour.	Tour Tab, Add Places, Selected Places, Tour Overview	Registered User	Existing requirement
FR07	View route details and track tour progress.	Tour Overview, Active Tour, Tour Progress, Completion, Summary	Registered User	Existing requirement
FR08	Support tour-guide application, review status and approval states.	Guide Application Review, Pending, Needs Work, Approved	Tour Guide	Provisional mapping
FR09	Allow guides to maintain public profile, service area and service details.	Guide Public Profile, Edit Public Story, Edit Service Area, Edit Guide Profile	Tour Guide	Provisional mapping
FR10	Deliver relevant notifications to travelers and guides.	Traveler Notifications, Guide Notifications	Traveler / Tour Guide	Provisional mapping
FR11	Match travelers with compatible travel buddies using preferences and shared interests.	Smart Travel Buddy Matching	Registered Traveler	Provisional mapping
FR12	Support real-time communication and coordination with an accepted travel buddy.	Travel Buddy Match, Real-Time Chat / Coordination	Registered Traveler	Provisional mapping
FR13	Browse, filter, and discover certified local tour guides by specialty, spoken language, and real-time availability.	Guide Directory, Filter by Language, Guide Card View	Registered Traveler	Existing requirement
FR14	Customize tour booking details, select duration packages, schedule time slots, and configure visitor party size.	Tour Package Selection, Booking Time Slot, Guest Stepper	Registered Traveler	Existing requirement
FR15	Provide designated landmark meeting points with walking guidance, live guide arrival tracking, and offline handshake verification.	Meeting Location Map, Booking Summary (Pay CTA), Active Guide Tracker	Registered Traveler / Tour Guide	Existing requirement

2.1 Variant Selection Rationale

Interface	Selected Direction	Reason
Login	Simple login layout (Variant A)	Other variants include more visual sections and take extra screen space. Variant A is selected because the login fields, Forgot Password, Sign In, and Create Account actions are clearly visible and easy to access.
Choose Account Type	Role-card layout (Variant A)	More detailed alternatives make role selection unnecessarily complex. Variant A clearly separates Traveler/Tourist and Tour Guide accounts, so users can quickly select the correct role.
Tourist Registration – Account Details	Vertical form layout (Variant A)	Other variants divide the details into additional cards and require more space. Variant A keeps username, email, and phone number in a simple vertical form, making registration clear and easy.
Tourist Registration – Password	Focused password layout (Variant A)	Alternative layouts contain extra elements that are not needed for password creation. Variant A keeps the password and confirmation fields together with clear Continue and Back actions.
Tourist Registration – Optional Details	Simple optional-details form (Variant A)	More detailed layouts make optional information appear compulsory and increase screen complexity. Variant A clearly separates the optional information and provides a Skip option.
Email Verification	OTP verification layout (Variant A)	Other variants use larger sections and require additional space. Variant A keeps the verification code, Verify Email, and Resend Code actions together, making the process simple and focused.
Guide Registration – Account Details	Structured registration form (Variant A)	Alternative layouts use additional grouping that makes the first registration step look more complex. Variant A clearly displays the required guide account information in one simple form.
Guide Registration – Password	Focused password form (Variant A)	The other variants add unnecessary visual elements. Variant A contains only the required password fields and navigation actions, making the step easier to complete.
Guide Registration – Service Details	Guide information form (Variant A)	More compact alternatives do not provide enough space for important guide details. Variant A clearly presents the service area, experience, languages, and professional information.
Guide Application Review	Application-summary layout (Variant A)	Other variants divide the information into several cards and use more screen space. Variant A provides one clear summary, allowing the guide to review information before submission.
Guide Application Pending	Status-progress layout (Variant A)	Alternative layouts contain more graphical elements than necessary. Variant A clearly shows that the application is submitted and waiting for administrator approval.
Guide Login – Review Pending	Status-focused layout (Variant A)	More detailed designs can distract users from the main message. Variant A focuses on the pending-review status and provides only the necessary next actions.

Guide Application – Needs Work	Feedback-and-action layout (Variant A)	Other layouts make administrator feedback less noticeable. Variant A highlights the required changes and provides a clear Review & Update Application action.
Tourist Profile	Profile-summary layout (Variant A)	Alternatives contain more cards and can make the profile appear crowded. Variant A keeps personal details, profile statistics, and the Edit Profile action simple and easy to scan.
Guide Public Profile	Public-profile layout (Variant A)	More detailed alternatives require more scrolling and separate information into too many sections. Variant A clearly presents guide information, statistics, service details, and profile content.
Edit Tourist Profile	Standard edit form (Variant A)	Alternative layouts use extra sections for simple personal details. Variant A provides familiar editable fields with clear Save Changes and Cancel actions.
Edit Guide Public Profile	Guide-story form (Variant A)	Other variants divide the information into additional cards, increasing complexity. Variant A provides enough space for the guide's display name, languages, experience, and introduction.
Edit Guide Service Area	Service-location form (Variant A)	Map-heavy or card-based alternatives take more screen space. Variant A clearly groups primary service area, additional areas, and guide specialties in a simple layout.
Forgot Password	Simple recovery form (Variant A)	Alternative layouts separate the recovery options into more steps. Variant A keeps the available account identification details together and provides one clear Send Security Code action.
Reset Password	Minimal reset-password layout (Variant A)	More detailed variants contain unnecessary information. Variant A only presents New Password, Confirm Password, and Save New Password, keeping the task simple.
Password Recovery Verification	OTP recovery layout (Variant A)	Alternative designs use additional status sections and take more space. Variant A follows the same OTP pattern used for email verification, improving consistency.
Password Updated	Success-confirmation layout (Variant A)	Other variants display more information than necessary after completion. Variant A gives clear success feedback and provides one direct Return to Sign In action.
Edit Guide Profile	Comprehensive edit form (Variant A)	Other variants split the information across several sections. Variant A keeps the main guide details together, allowing the user to update the profile efficiently.
Traveler Notifications	Notification-card layout (Variant A)	More detailed variants make the notification screen appear crowded. Variant A uses simple cards for booking, guide, and payment updates, making notifications easy to scan.
Guide Notifications	Notification-list layout (Variant A)	Alternative layouts use additional controls and visual categories. Variant A presents application, booking, and profile notifications clearly in a simple list.
Registration Complete	Success-and-next-step layout (Variant A)	Other designs contain more decorative content and require extra space. Variant A clearly confirms successful registration and provides a direct Go to Login action.
Guide Application Approved	Approval-confirmation layout (Variant A)	More detailed alternatives can make the approval screen crowded. Variant A clearly communicates approval and provides direct next actions for guide mode and public profile setup.

Smart Travel Buddy Matching	Balanced buddy-matching layout (Variant A)	Variant B gives more priority to the map and route, so companion details and AI matching information become less noticeable. Variant C focuses mainly on the chat, which is more suitable after a buddy has already been selected. Variant A is selected because it provides the best balance between destination details, AI Concierge suggestions, match percentage, companion information, shared interests, meeting-point details, and chat access on one screen. This makes the matching process clearer, easier to understand, and more suitable for the main Travel Buddy interface.
------------------------------------	--	---

Home / Community Feed	Trending-first feed layout (Variant A)	Places and trending posts are visible immediately after search. The vertical community feed also allows users to easily browse, like, and comment on historical place posts.
Tour Planning	Search-and-add layout (Variant A)	Users can easily search, add, and review multiple places, making the tour-planning process simple and clear.
Create Post	Direct post-creation (Variant B)	Variant B provides a simpler and more direct post-creation flow. Photo upload, caption, and post actions are clearly organised with fewer steps.
Tour Overview	Simple overview layout (Variant A)	Other variants contain more detailed elements and can make the screen visually crowded. Variant A was selected because it provides a simpler layout that allows users to quickly review tour details and follow the tour sequence.
Tour Progress	Simplified progress layout (Variant B)	The map-based alternative provides more information but adds extra complexity and requires more screen space. Variant B was selected because the simpler layout makes tour progress easier to understand.
Tour Completion	Simple completion layout (Variant A)	Other variants add extra elements and require more screen space. Variant A was selected because it provides a clean and simple design that clearly informs users that the tour has been completed.
Tour Summary	Detailed summary layout (Variant B)	Variant A includes a map and a full information list, which makes the screen more crowded and requires additional space. Variant B was selected because it presents the important tour summary information in a cleaner and simpler layout.
Search Places	Search-focused layout (Variant A)	Other variants include a more detailed map and full place list, which can make the interface crowded and require more space. Variant A was selected because it keeps the place-searching process simple, clear, and easy to use.
Search and View Information	Information-focused layout (Variant A)	Other variants contain larger image galleries and more detailed content, which can make the screen feel cluttered. Variant A was selected because it focuses on the key information and provides a cleaner viewing experience.

Payment / Checkout	Variant A selected	Summary-first checkout with clear total, payment method, and confirm action reduces errors and supports trust.
Payment Progress	Variant A selected	A is easier because it clearly shows whether the payment was successful or failed and tells the user what to do next.
Ratings & Reviews	Variant A selected	Simple star rating with optional text review and quick sorting is faster for users easier to moderate.

Select Guide	Detailed card list layout (Variant A)	Grid alternatives (Variant C) truncate guide credentials and make touch targets too small on mobile devices. Variant B hides languages under extra dropdowns. Variant A presents SLTDA certification, spoken languages ([EN] [SI] [TA]), rating, and immediate booking status on a single scannable card.
Tour Package Customization	Modular radio cards and numeric stepper (Variant A)	Dropdown menus (Variant B) and complex sliders (Variant C) increase friction and require excessive tapping. Variant A clearly contrasts the 2-Hour Heritage Walk against the 45-Min Point-to-Point assist, while a simple stepper control supports family
Meeting Location & Route	Architectural landmarks map (Variant A)	Heavy satellite maps (Variant B) fail to load when connectivity drops near stone bastions. Text-only directions (Variant C) caused tourists to miss the gate archway during Galle Fort field observations. Variant A provides an offline-cached layout showing the ramparts, Clock Tower Gate pin, and walking distance.
Booking Summary & Payment	Consolidated summary card with direct "Pay Now" button (Variant A)	Plain text addresses (Variant B) and multi-step accordions (Variant C) cause app-switching fatigue and hide subtotal fees. Variant A displays meeting point, time, guest count, and total fee with an immediate "Pay Now" button routing to the payment module.
Active Guide Tracker	Arrival countdown with verification PIN (Variant A)	Real-time radar maps (Variant C) and GPS-only trackers (Variant B) freeze when mobile signals drop near rampart walls. Variant A displays an 8-minute countdown alongside a dashed offline PIN (#4821) ensuring verified mutual authentication under zero data connection (NFR1)

The HISTORIA interaction flow supports discovering historical places, viewing location details, creating community posts, planning tours, and tracking journeys. Users can search places, view historical information, add destinations to a tour, monitor progress, and receive a completion summary after finishing the journey.

f. User Testing Plan

User testing will be conducted with representative users of the **Historical Walking-Tour Route Planner Mobile App**, including travelers and tour guides. The purpose of the testing is to identify usability problems, check whether users can complete the main tasks without assistance, and evaluate whether the navigation, labels, buttons, and information presented in the prototype are clear.

Task	Success Criteria	Metrics
1. Register and log in to the application	The user can select the correct account type, complete registration, verify the account, and log in without assistance.	Task completion rate, completion time, number of errors, number of hints required
2. Recover a forgotten password	The user can find the Forgot Password option, complete verification, create a new password, and return to login successfully.	Completion rate, time taken, incorrect attempts, user comments
3. Search and view a historical place	The user can search for a historical location and open its details successfully.	Search completion time, number of taps, navigation errors

4. Create a multi-stop historical tour	The user can select more than one historical place, add them to the tour, and review the planned route.	Completion rate, time taken, incorrect selections, ease-of-use rating
5. Find a suitable travel buddy	The user can understand the match percentage and shared interests, view a suggested travel buddy, and access the available communication option.	Time to identify a suitable match, number of navigation errors, clarity rating
6. Find and select a tour guide	The user can view guide information, compare available guides, and select a suitable guide based on language, service details, rating, and availability.	Task completion rate, selection time, number of incorrect actions
7. Customize and confirm a guide booking	The user can select a tour package, time slot, number of visitors, meeting location, and review the booking details.	Completion time, number of errors, successful booking rate
8. Complete the payment process	The user can select a payment method, understand the total amount, complete the payment, and recognize whether the transaction was successful or unsuccessful.	Payment task completion rate, errors, completion time, clarity of feedback
9. Track the guide and meeting location	The user can understand the meeting point, guide arrival information, and available verification details.	Time to locate information, navigation errors, clarity rating
10. Submit a rating and review	The user can provide a rating, enter an optional comment, and submit the review successfully.	Completion rate, time taken, errors, satisfaction rating

Testing Metrics

The results will be evaluated using **task completion rate, task completion time, number of errors, number of hints required, number of taps, and user satisfaction ratings**. After completing the tasks, participants will also be asked to provide short comments about confusing elements, useful features, and areas that should be improved.

A task will be considered successful when the participant completes the intended action without major assistance or critical navigation errors. Issues repeatedly experienced by several participants will be given higher priority during the next design refinement.

g. Recommendations for Further Refinement

Based on the prototype design and the results expected from usability testing, several areas can be further refined before developing the final application. Navigation between major areas such as **Home, Tour Planning, Travel Buddy, Guide Booking, Notifications, and Profile** should remain consistent so that users can easily understand where they are within the application.

The registration and password-recovery processes should be kept simple, with clear validation messages when users enter incorrect or incomplete information. Verification screens should clearly explain whether a code has been sent, whether verification was successful, and what the user should do next.

Historical place information and tour-planning screens should be improved by maintaining a clear visual hierarchy between place names, images, descriptions, route information, and action buttons. The process of adding, removing, or rearranging destinations in a multi-stop tour should also require as few steps as possible.

The **Smart Travel Buddy Matching** interface should clearly explain the match percentage, shared interests, travel preferences, and other reasons for the suggested match. Important actions such as viewing a buddy profile or communicating with an accepted travel buddy should be easy to identify.

For tour-guide booking, guide information such as **languages, ratings, experience, service areas, availability, package details, meeting location, and booking cost** should remain clearly visible before confirmation. The booking process should also provide clear feedback after each important action.

The payment interface should clearly show the selected booking, total amount, payment method, and payment result. Successful and unsuccessful payment states should be visually different and should provide clear next actions, such as viewing the booking, retrying the payment, or changing the payment method.

Accessibility should also be improved by maintaining readable text sizes, sufficient contrast, clear icons with labels, appropriate button sizes, and consistent spacing. The interface should be tested on different mobile screen sizes to make sure that important information and buttons remain visible and easy to use.

Finally, feedback collected during user testing should be used to refine the prototype iteratively. Frequently reported problems, tasks with low completion rates, and screens that take users too much time to understand should receive the highest priority during the next design iteration.
